

CLAIMS

1. A flame retarded resin composition comprising at least one resin selected from the group consisting of polycarbonate, polyester and mixtures thereof, and a flame retarding effective amount of at least one nonhalogenated arylalkylsilyl flame retardant, the flame retarded resin composition being substantially free of haloorganic flame retardant and phosphate flame retardant.
5
2. The flame retarded resin composition of Claim 1 wherein the polycarbonate resin is an aromatic polycarbonate and the polyester resin is an aromatic polyester.
3. The flame retarded resin composition of Claim 1 further comprising at least one
10 other molding grade thermoplastic resin.
4. The flame retarded resin composition of Claim 3 wherein the other molding grade thermoplastic resin is selected from the group consisting of polystyrene, acrylonitrile-butadiene-styrene, high impact polystyrene, polyamides, polyethylene, polypropylene, polysulfone, polyvinyl acetate, ethylene-vinyl acetate copolymers, poly(methyl methacrylate), polyethylene
15 oxide, cellulose acetate, cellulose nitrate and mixtures thereof.
5. The flame retarded resin composition of Claim 2 further comprising at least one other molding grade thermoplastic resin.
6. The flame retarded resin composition of Claim 5 wherein the other molding grade thermoplastic resin is selected from the group consisting of polystyrene, acrylonitrile-butadiene-styrene, high impact polystyrene, polyamides, polyethylene, polypropylene, polysulfone,
20 polyvinyl acetate, ethylene-vinyl acetate copolymers, poly(methyl methacrylate), polyethylene oxide, cellulose acetate, cellulose nitrate and mixtures thereof.

7. The flame retarded resin composition of Claim 1 wherein the polycarbonate resin is present at a level of from about 70 to about 100 weight %.

8. The flame retarded resin composition of Claim 1 wherein the polyester resin is present at a level of from about 70 to about 100 weight %.

5 9. The flame retarded resin composition of Claim 1 wherein the polycarbonate resin is present at a level of from about 50 to about 100 weight %.

10. The flame retarded resin composition of Claim 1 wherein the polyester resin is present at a level of from about 50 to about 100 weight %.

10 11. The flame retarded resin composition of Claim 3 wherein the other thermoplastic resin is present at a level up to about 50 weight %.

12. The flame retarded resin composition of Claim 3 wherein the other thermoplastic resin is present at a level of up to about 30 weight %.

13. The flame retarded resin composition of Claim 1 wherein the arylalkylsilyl flame retardant is represented by the following formula:

15

wherein R^1 , R^3 , R^5 and R^6 each independently is aryl or substituted aryl; R^2 and R^4 each independently is a lower alkyl; X is a bridging group derived from a diol possessing an arylene moiety; and, n has a value of up to about 20.

14. The flame retarded composition of Claim 13 wherein R^1 , R^3 , R^5 and R^6 each independently is aryl or substituted aryl of from 6 to about 22 carbon atoms, R^2 and R^4 each independently is a lower alkyl of from 1 to about 4 carbon atoms, and n has a value of up to 5.

5 15. The flame retarded composition of Claim 13 wherein R^2 and R^4 each is a methyl group.

16. The flame retarded composition of Claim 13 wherein bridging group x is represented by one of the following structures:

10

17. The flame retarded composition of Claim 13 wherein n is 1 or 2.

18. The flame retarded composition of Claim 13 wherein the arylalkylsilyl flame retardant is present at a level of from 1 to about 30 weight %.

19. The flame retarded resin composition of Claim 2 wherein the arylalkylsilyl flame retardant is represented by the following formula:

5

wherein R^1 , R^3 , R^5 and R^6 each independently is aryl or substituted aryl; R^2 and R^4 each independently is a lower alkyl; X is a bridging group derived from a diol possessing an arylene moiety; and, n has a value of up to about 20.

20. The flame retarded composition of Claim 19 wherein R^1 , R^3 , R^5 and R^6 each
10 independently is aryl or substituted aryl of from 6 to about 22 carbon atoms, R^2 and R^4 each independently is a lower alkyl of from 1 to about 4 carbon atoms, and n has a value of up to 5.

21. The flame retarded composition of Claim 19 wherein R^2 and R^4 each is a methyl group.

22. The flame retarded composition of Claim 19 wherein bridging group x is represented by one of the following structures:

5 23. The flame retarded composition of Claim 19 wherein n is 1 or 2.

24. The flame retarded composition of Claim 19 wherein the arylalkylsilyl flame retardant is present at a level of from 1 to about 30 weight %.

25. The flame retarded resin composition of Claim 3 wherein the arylalkylsilyl flame retardant is represented by the following formula:

10

wherein R^1 , R^3 , R^5 and R^6 each independently is aryl or substituted aryl; R^2 and R^4 each independently is a lower alkyl; X is a bridging group derived from a diol possessing an arylene moiety; and, n has a value of up to about 20.

26. The flame retarded composition of Claim 25 wherein R^1 , R^3 , R^5 and R^6 each independently is aryl or substituted aryl of from 6 to about 22 carbon atoms, R^2 and R^4 each independently is a lower alkyl of from 1 to about 4 carbon atoms, and n has a value of up to 5.

27. The flame retarded composition of Claim 25 wherein R^2 and R^4 each is a methyl group.

28. The flame retarded composition of Claim 25 wherein bridging group X is represented by one of the following structures:

29. The flame retarded composition of Claim 25 wherein n is 1 or 2.

30. The flame retarded composition of Claim 25 wherein the arylalkylsilyl flame retardant is present at a level of from 1 to about 30 weight %.

31. The flame retarded resin composition of Claim 5 wherein the arylalkylsilyl flame retardant is represented by the following formula:

wherein R^1 , R^3 , R^5 and R^6 each independently is aryl or substituted aryl; R^2 and R^4 each independently is a lower alkyl; X is a bridging group derived from a diol possessing an arylene moiety; and, n has a value of up to about 20.

32. The flame retarded composition of Claim 31 wherein R^1 , R^3 , R^5 and R^6 each independently is aryl or substituted aryl of from 6 to about 22 carbon atoms, R^2 and R^4 each independently is a lower alkyl of from 1 to about 4 carbon atoms, and n has a value of up to 5.

33. The flame retarded composition of Claim 31 wherein R^2 and R^4 each is a methyl group.

34. The flame retarded composition of Claim 31 wherein bridging group x is represented by one of the following structures:

35. The flame retarded composition of Claim 31 wherein n is 1 or 2.

36. The flame retarded composition of Claim 5 wherein the arylalkylsilyl flame retardant is present at a level of from 1 to about 30 weight %.

37. A method for making arylalkylsilyl flame retardant of Claim 13 having a high weight ratio of dimer to oligomer which comprises reacting a molar excess of an alkyltrichlorosilane with a diphenol to obtain a diphenyl bis(dichloroalkylsilane), removing unreacted alkyltrichlorosilane by distillation, reacting the diphenyl bis(dichloroalkylsilane) from

which unreacted alkyltrichlorosilane has been removed with a molar excess of the same or different phenol to provide arylalkylsilyl flame retardant and removing unreacted phenol from the arylalkylsilyl flame retardant by distillation.
